PROJECT PROFILE

PROJECT: Lisbon Airport - Roof Refurbishment
LOCATION: Portugal

THE PROBLEM

The roof of this building at Lisbon Airport had deteriorated over time and was in need of immediate refurbishment.

Thortex was approached for a waterproofing and long-term protection system for the 1,400 sqm roof.

THE SOLUTION

The bituminous surface was suitably prepared and primed with Poly-Tech BP Primer, ensuring any damaged areas had been repaired prior to application. The reinforced Poly-Tech system was then applied.

Poly-Tech is a universal roof protection system, which has been developed by Thortex for the long-term protection of all types of roof surface including asphalt, bitumen, mineral felt, asbestos cement, concrete and metal surfaces. As well as providing optimum levels of UV resistance, flexibility and durability, Poly-Tech offers outstanding waterproofing and weatherproofing properties.
