PROJECT PROFILE

PROJECT: Operating Theatre - Floor & Wall Protection
LOCATION: India

THE PROBLEM

The floors and walls of this hospital operating theatre had been earmarked for refurbishment.

The Hospital Maintenance Manager approached Thortex for a solution which would offer a hygienic, seamless, easy-to-clean and maintain finish and meet all Health & Safety requirements laid down by the hospital.

THE SOLUTION

The operating theatre floor was thoroughly cleaned and abraded, ensuring any loose/flaking material was removed. The substrate was then coated with Uni-Tech GP Primer, over which Floor-Tech PSL was applied.

Floor-Tech PSL is a three component, solvent-free, self-levelling polyurethane screed which offers optimum levels of adhesion and flexibility.

The walls were prepared and primed with Uni-Tech GP Primer. Our two component, water-based, colour stable polyurethane coating Wall-Tech UV was then applied.
