PROJECT PROFILE

PROJECT: VASA Ambulance Service - Vehicle Interior Protection
LOCATION: Netherlands

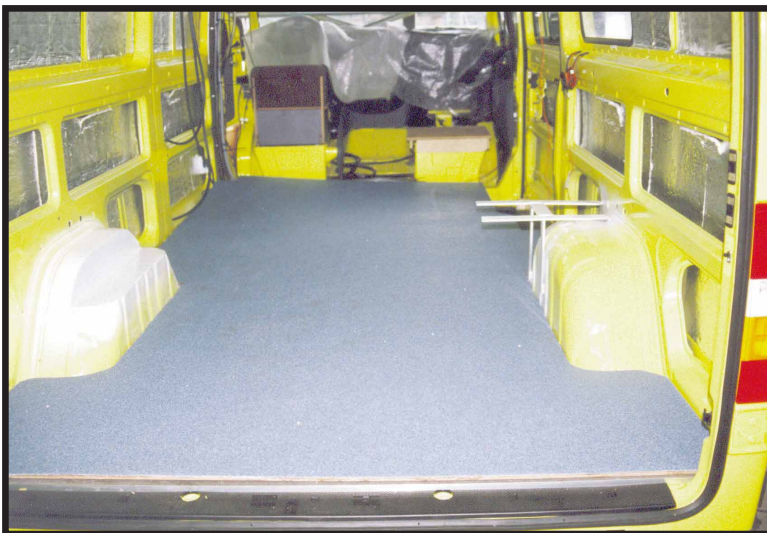

THE PROBLEM

Thortex was approached by a company in 2000 that installs fittings to specialised vehicles, a large number of which are Mercedes used predominantly by the Ambulance Service in the Netherlands.

The client required a decorative, hardwearing finish that could be used to protect wooden and glass reinforced plastic interior panels within the ambulance - driver and passenger wells, rear floor and other connected sections.

THE SOLUTION

The surface to be protected was suitably prepared and treated, after which the multi-coat Floor-Tech FS system was applied.

The Floor-Tech FS system comprises a special base coat, into which Floor-Tech FS Flakes are scattered and a protective topcoat of our water-based, colour stable, abrasion resistant polyurethane coating Floor-Tech FS Seal.

The client and its customer have been pleased with the results to the extent that approximately 100 vehicles per year are now protected using this high performance Thortex coating system.
