PROJECT PROFILE

PROJECT: International Pharmaceutical Company - Wall Protection
LOCATION: Singapore

THE PROBLEM

This research-based, global pharmaceutical and biotechnology company has undertaken an extensive upgrade of its premises over the last four years. The areas to be protected included production, clean room, wash room and warehouse walls, which totalled 35,000m².

THE SOLUTION

The walls were prepared and primed with Uni-Tech GP Primer. The primed surface was treated with our water-based embedment coat Wall-Tech CSM incorporating Thortex Chopped Strand Matt and Surface Tissue. Two coats of our water-based epoxy coating Wall-Tech WB were finally applied.

Wall-Tech CSM applied in conjunction with Wall-Tech WB provides a hygienic, completely seamless, impact-resistant finish that is ideal for use in pharmaceutical concerns, hospitals, food preparation areas, kitchens and abattoirs.
